Abstracts

The global Latex Medical Disposables market was valued at 4050.23 Million USD in 2021 and will grow with a CAGR of 2.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Latex medical disposables such as latex gloves are used during surgeries and check-ups. The demand for latex medical disposables is therefore quite high among doctors, surgeons, and dentists across the globe. Primarily, there are two types of latex gloves available in the market. These are powdered and non-powdered latex gloves. The non-powdered gloves might witness relatively more demand when compared with powdered gloves, as powdered gloves were found to be hindering the healing process of patients. The market might encounter obstacles owing to the prevalence of latex allergies that induce several healthcare professionals to use non-latex products instead. Moreover, with the intensifying competition, the market players might have to bring down the prices of their products. As a result, sluggish growth in revenue might restrict the growth of the global market for latex medical disposables. However, the impact of these restraints will be negated by the emergence of novel technologies.
