The global Lead Nitrate market was valued at 44.13 Million USD in 2021 and will grow with a CAGR of 3.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Lead(II) nitrate is an inorganic compound with the chemical formula $Pb(NO_3)_2$. It commonly occurs as a colourless crystal or white powder and, unlike most other lead(II) salts, is soluble in water. Historically, the main use was as a raw material in the production of pigments for lead paints, but such paints have been superseded by less toxic paints based on titanium dioxide. Other industrial uses included heat stabilization in nylon and polyesters, and in coatings of photothermographic paper. Since around the year 2000, lead(II) nitrate has begun to be used in gold cyanidation. North America plays an important role in global lead chemicals market, especially United States, which has great influence on the development of lead chemicals. The Europe market developed slowly in the past few years and will keep the trend in the few years, and Europe is also full of much uncertainty, from political elections, trade policy and historical problems. In Europe market, Germany, UK and France are playing significant roles. Currently, Hanhua Chemical, Orica, Dynakrom, Aerocell and Zhuzhou Jinyuan Chemical are major manufacturers of this industry. Dynakrom is a global leader. In 2019, the sale of Hanhua Chemical was 4236 MT, and the company held a share of 21%. Due to its rich mineral reserves and relatively relaxed environmental policies, the world's leading lead

chemical manufacturers are located in China and India.
