Abstracts

The global LED Explosion Proof Lighting market was valued at 56.88 Million USD in 2021 and will grow with a CAGR of 8.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

LED Explosion Proof Lighting (also known as hazardous area lighting, hazardous location lighting and safe lights) have a hazardous area certification to provide efficient lighting for areas exposed to hazardous vapors, gases or dust. This industry is highly fragmented. Most companies are small except for a few large companies. These small businesses have different levels of technical management and production management. Especially in China, many small companies blindly imitate the products of large enterprises. In the competition, these companies often occupy the market by low prices. LED explosion-proof lamp industry concentration is too low, which can only rely on increasing the supervision of product quality and relying on the continuous purification of the market to gradually solve. With the continuous development of key enterprises in the industry, some small enterprises will gradually withdraw from the LED explosion-proof lamp market. Of the major players of LED-Based Lamps Used in Explosion-Proof Lighting, Ocean`S King Lighting maintained its first place in the ranking in 2017, followed by Eaton and Emerson Electric. In this study, the market for LED Explosion Proof Lighting consumption divided into five geographic regions including North America, Europe, Asia-Pacific, Latin America and Middle East and Africa. Among all

regions, Asia-Pacific is estimated to represent the highest share. In terms of value, the Asia Pacific (APAC) region is forecast to grow at a faster pace versus other regions during the forecast period, driven by use of the LED lamps in the commercial/ industrial (factory) application. The American region (South, Central and North America) region, pushed initially by the mining and oil-related sub-applications and is forecast later-on to hold strong market positions in commercial/industrial, mining/oil-related, as well as the military and transportation-oriented sectors. The Europe, Middle East and African (EMEA) region, driven by its use of explosion-proof lighting in the oil-related industry, is forecast for slightly faster growth than the American region.
