The global Lepidolite market was valued at 2.9 Million USD in 2021 and will grow with a CAGR of 31.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Lepidolite is a lilac-gray or rose-colored member of the mica group of minerals with formula $K(Li,Al,Rb)_2(Al,Si)_4O_{10}(F,OH)_2$. It is the most abundant lithium-bearing mineral and is a secondary source of this metal. It is a phyllosilicate mineral and a member of the polyolithionite-trilithionite series. It is associated with other lithium-bearing minerals like spodumene in pegmatite bodies. It is one of the major sources of the rare alkali metals rubidium and caesium. In 1861, Robert Bunsen and Gustav Kirchhoff extracted 150 kg (330 lb) of lepidolite and yielded a few grams of rubidium salts for analysis, and therefore discovered the new element rubidium. It occurs in granite pegmatites, in some high-temperature quartz veins, greisens and granites. Associated minerals include quartz, feldspar, spodumene, amblygonite, tourmaline, columbite, cassiterite, topaz and beryl. China is the largest consumption country, and also is the largest production base for lithium carbonate by Lepidolite. China Lepidolite is mainly located in Jiang Xi province. Due to the development of new energy vehicles, the market demand for lithium in China is very large. But because of the production process and the problem of waste generated, Lepidolite just occupied very small market share.
