Abstracts

The global Lighting Fixtures market was valued at 15777.68 Million USD in 2021 and will grow with a CAGR of 3.99% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A light fixture, light fitting, or luminaire is an electrical device that contains an electric lamp that provides illumination. All light fixtures have a fixture body and one or more lamps. The lamps may be in sockets for easy replacement or, in the case of some LED fixtures, hard-wired in place. A significant number of industries are currently in a transitory phase towards improving power consumption to work performed ratios. One of the core methods to reduce power consumption is through the implementation of modern and efficient lighting fixtures. As a result, industries switching over from incandescent and fluorescent lighting to modern LED lighting offer the biggest driver to lighting fixture producers. Additional drivers include the booming construction industry and the overall increase in population and disposable income across the world and especially in emerging economies. There is, however, a high initial investment required for new entrants to the lighting fixture production business. At the same time, the multiple number of members involved in making an end-user purchase decision add to the complexity of the buying process, thereby restraint the growth rate of lighting fixture players to a certain extent.
