The global Lightning Arrester market was valued at 116.52 Million USD in 2021 and will grow with a CAGR of 1.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Lightning Arrester is a device, used on power systems, which contains billions of electronic switches that divert lightning around sensitive equipment and protects them from damage of lightning and switching surges. There are four different classes of arresters, including station class, intermediate class, distribution class and secondary class. Lightning arrester product demand is in a certain space, and the main consumer countries are moderately developed countries and developed countries. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field. In the last few years, the total number of new type of lightning arrester developed by domestic manufacturers is limited. This shows that the efforts to develop new product in China is not enough, but also shows that the allocation space of domestic lightning arrester still need to expand. There is still a big gap compared with the imported lightning arrester.
