The global Lignin market was valued at 618.28 Million USD in 2021 and will grow with a CAGR of 3.76% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Lignin is the most abundant natural raw material available on Earth in terms of solar energy storage. It represents 30 per cent of all the non-fossil organic carbon on Earth. Lignin can be used as a green alternative to many petroleum-derived substances, such as fuels, resins, rubber additives, thermoplastic blends, nutra and pharmaceuticals. It is also known to be the only renewable source for industrial aromatics production. Lignin can be found in other plants, such as cereal straws, bamboo and bagasse, but it is in wood that lignin content is the highest in terms of weight: 20-35 percent in wood compared to 3-25 per cent in other lignin sources. Typically, kraft and organosolv lignins are two suitable candidates, whereas lignosulfonates will most likely lead to lower-value chemicals, which require more complicated processing. In this report, we mainly analyze the lignosulphonates and Kraft lignin, including sodium lignosulfonate products, calcium lignosulfonate products, magnesium lignosulfonate products and Kraft lignin etc
