The global Linear Friction Welding Machines market was valued at 139.71 Million USD in 2021 and will grow with a CAGR of 3.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Friction welding (FRW) is a solid-state welding process that generates heat through mechanical friction between work pieces in relative motion to one another, with the addition of a lateral force called 'upset' to plastically displace and fuse the materials. Linear Friction Welding: a solid-state process in which one part is chuck oscillates at a high speed, and then pressed against another part that is held stationary. The resulting friction heats the parts, causing them to forge together. There are many linear friction welding machines manufacturers in the world and most of them produce all kinds of friction welding machine, such as Branson, Thompson, MTI, Bielomatik and Forward Technology. All the manufactures are mainly concentrated in USA, Europe, etc. Although there are also some Friction Welding Machine manufacturers in developing countries, but the scales of their Linear friction welding machines companies is relative small, and the products quality is inferior to foreign Friction Welding Machine products, so the price is lower than some foreign Friction Welding Machine products.
