The global Liquid Chromatography Instruments market was valued at 391.45 Million USD in 2021 and will grow with a CAGR of 4.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Liquid chromatography is a technique used to separate a sample into its individual parts. This separation occurs based on the interactions of the sample with the mobile and stationary phases. Because there are many stationary/mobile phase combinations that can be employed when separating a mixture, there are several different types of chromatography that are classified based on the physical states of those phases. Liquid-solid column chromatography, the most popular chromatography technique and the one discussed here, features a liquid mobile phase which slowly filters down through the solid stationary phase, bringing the separated components with it. The classification of Liquid Chromatography Instruments includes HPLC, UHPLC, LPLC and Other type of liquid chromatography. And the proportion of HPLC in 2017 is about 72.99%, and the proportion is in decreasing trend from 2013 to 2017.
