The global Liquid Crystal Polymers (LCPs) market was valued at 1260.13 Million USD in 2021 and will grow with a CAGR of 2.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

LCPs (Liquid Crystal Polymers) are partially crystalline aromatic polyesters based on p-hydroxybenzoic acid and related monomers. LCPs form areas of highly ordered structures when in the liquid phase but the degree of order is less than that of a regular solid crystal. LCPs are fire resistant at high temperatures and chemically resistant in very thin walled applications. LCPs are typically used for medical applications, including trays and drug delivery systems, and in diagnostics for the automotive and telecommunication industries. Currently, LCP is still a high-end engineering plastics, compared to traditional engineering plastics, it has an absolute performance advantage, it is possible for few to manufacture the product, which leads to downstream consumer of bargaining power is not high, but upstream raw materials declining year by year, LCP product prices have reduced, but only slightly.
