The global LiTaO₃ Crystal market was valued at 30.04 Million USD in 2021 and will grow with a CAGR of 3.12% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

LiTaO₃ Crystal is typical multifunction crystal material, with NLO and E-O properties similar to those of LiNbO₃ but higher damage threshold (>500 MW/cm for ns pulsed), widely used in surface acoustic wave filters, interdigital transducers, optical modulators, electro-optical switches, pyroelectric IR detectors, etc. With the rapid development of communications, information industry development and industrialization of new optoelectronic materials it has excellent piezoelectric electromechanical coupling coefficient, low loss, high temperature stability, and good high-frequency performance, electro-optical and thermoelectric properties.
