## Abstracts

The global Lithium Hydroxide market was valued at 36.95 Million USD in 2021 and will grow with a CAGR of 11.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Lithium hydroxide is a compound formed of the white, soft metal lithium bound to a hydroxide group with the formula  $\text{LiOH}$ . It is commercially available in anhydrous form free of chemical bonds to water, though it is a hygroscopic chemical by nature that is also sold in monohydrate form as  $\text{LiOH} \cdot \text{H}_2\text{O}$ . The compound is used in a variety of industries with popular commercial demands for it in the manufacture of lithium batteries and as lithium hydroxide monohydrate to make lubricating greases. The major raw materials for lithium hydroxide monohydrate are Lithium ore, HCl and others. Fluctuations in the price of the upstream product will impact on the production cost of lithium hydroxide monohydrate, and then impact the price of lithium hydroxide monohydrate. Additionally, the quality of raw materials would also impact the quality of lithium hydroxide monohydrate. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents a downward trend according to the economy development status. Also, there will be fluctuation in gross margin.
