Printing inks are colored pastes that are formulated to transfer and reproduce an image from a printing surface. These inks are applied in thin films on many substrates such as paper, metal sheets, paperboards, and others. Printing inks can be designed to offer protective, decorative, and communicative functions. In some cases, combinations of these functions is achieved. Raw materials used in printing inks include pigments, resins, solvents, additives, and colorants. Various types of printing inks are used in the day-to-day life. These include flexography, screen, lithography, gravure, and digital. Of these, lithography is the dominant type of printing ink. Lithography, also known as offset lithography, is an offset process.
