The global Low Dielectric Resin market was valued at 110.29 Million USD in 2021 and will grow with a CAGR of 3.41% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Low dielectric resin is a series of resins with a dielectric constant  $k$  usually below 3.0. This report research is mainly based on the following resin, cyanate ester resin, m-PPE, fluoropolymer as well as some special resin with low dielectric. Low dielectric resin means a series of resins, such as m-PPE, PFA, cyanate ester resin, which own low dielectric constants. Applications of low dielectric resin mainly from electronic industry, such as PCB industry, antenna industry, microelectronics, etc. Among those applications, PCB industry accounts for the largest market share, which was about 67.80% in 2016. The low dielectric resin industry is relatively concentrated as Japan is the major production base. The region produced 31315 MT in 2016. The follower is USA, holding 26.97% production share. Global production of low dielectric resin increased from 62410 MT in 2012 to 77008 MT in 2016. As for consumption, Japan is also the largest consumer with about 29.43% share in 2016. The second consumer is USA, consuming 19411 MT. The low dielectric resin industry has close relationship with the electronic industry. With the gradually global economy, the electronic industry is resuming, which provides support for the industry.
