Magnetic particle Inspection (MPI) is a non-destructive testing (NDT) process for detecting surface and shallow subsurface discontinuities in ferromagnetic materials such as iron, nickel, cobalt, and some of their alloys. The process puts a magnetic field into the part. The classification of Magnetic flaw detectors include magnetic yokes, portable units and magnetic benches. Magnetic particle testing is one of the longest established and most commonly used nondestructive testing methods. It has been widely used in many different industries, especially in automobile, aerospace, oil and gas industries, which has a huge market share.
