Abstracts

The global Magnetic Pump market was valued at 585.36 Million USD in 2021 and will grow with a CAGR of 3.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

'Magnetic Drive' refers to the coupling between the wet end of the pump and the motor. In 'direct drive' pumps, the impeller of the pump is attached to the shaft of the motor, and this design depends on the shaft seal to contain the chemical. In a magnetic drive pump, the wet end and motor are two separate contained parts, connected by only a motor bracket. At the end of the motor shaft, a drive magnet is attached, and as the drive magnet rotates around the rear housing, the impeller, which is fixed upon another magnet, spins in synchronization. It is the attraction of the drive magnet and the impeller magnet which allows the full torque of the motor to be passed onto the pump. As the shaft of the motor does not extend into the interior of the pump, there is no need for a shaft seal, and without a shaft seal, the danger of leakage commonly associated with a shaft seal is eliminated. Furthermore, the maintenance cost is reduced because no time or money is spent on maintaining the shaft seal. The leading producers in the industry are Flowserve, Sundyne and Iwaki, with revenues of 5.04%, 4.34% and 4.15%, respectively.
