### Abstracts

The global Magnetron market was valued at 1609.42 Million USD in 2021 and will grow with a CAGR of 0% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A magnetron is a device that uses the interaction of a stream of electrons, guided by a magnetic field, with cavities within a block of copper to produce microwave radiation. The frequency range of the radiation depends on the size of the cavities. The devices are used in radar, and microwave ovens, where the radiation causes the molecules in food ? particularly water molecules ? to vibrate, leading to a rapid rise in temperature that is sufficient to cook the food. The global 2015 Magnetron Production will reach 139000 K Unit from 104700 K Unit in 2010. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field. Although sales of Magnetron brought a lot of opportunity, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Magnetron field.
