Manganese carbonate is a water-insoluble source of manganese that can be converted into other manganese compounds such as manganese oxide by calcination.

Manganese carbonate occurs naturally as mineral rhodochrosite. It is available in variety of colors such as pink, red, grey, yellow, and brown. In terms of demand, agrochemicals accounts for major share of the global manganese carbonate market. Additionally, manganese carbonate can be used in other value-added applications such as glaze colorants. It can also be employed as a chemical intermediate for synthesis of other chemical compounds. Furthermore, manganese carbonate can be used as a hematinic in the medical industry and as supplement in the food industry.
