Manual resuscitator is a hand-held device commonly used to provide positive pressure ventilation to patients who are not breathing or not breathing adequately. The device is a required part of resuscitation kits for trained professionals in out-of-hospital settings (such as ambulance crews) and is also frequently used in hospitals as part of standard equipment found on a crash cart, in emergency rooms or other critical care settings. North America is the largest sales place, with a sales market share nearly 28.7% in 2017. The demand for resuscitators in North America is expected to witness growth owing to the increasing cases of cardiac arrest and neonatal ventilation.
