The global Marine Derived Drugs market was valued at 1835.63 Million USD in 2021 and will grow with a CAGR of 8.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Most marine-derived compounds possess a few defining characteristics. First, often very low doses are given to patients, and they are administered almost exclusively via intravenous infusion (i.v.). The compounds are typically large molecules, especially the depsipeptides, and they are often hydrophobic. These attributes make them fascinating compounds in terms of pharmacokinetics but also from a bioanalytical point of view. The first marine-derived compound approved by the United States (US) Food and Drug Administration (FDA) was cytarabine (Cytosar U?) in 1969, followed by trabectedin (Yondelis?), eribulin mesylate (Halaven?), brentuximab vedotin (Adcetris?), and midostaurin (Rydapt?) in the years 2007, 2010, 2011, 2013, and 2017, respectively. The classification of Marine Derived Drugs includes mollusk sources, Sponge sources, tunicate sources, fish sources and others. And the proportion of mollusk sources is occupied 49.40% of global revenue market share in 2018.
