Abstracts

The global Marine Dynamic Positioning System market was valued at 1528.27 Million USD in 2021 and will grow with a CAGR of 2.25% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Dynamic positioning (DP) is a computer-controlled system to automatically maintain a vessel's position and heading by using its own propellers and thrusters. Position reference sensors, combined with wind sensors, motion sensors and gyrocompasses, provide information to the computer pertaining to the vessel's position and the magnitude and direction of environmental forces affecting its position. The expected downturn in the offshore industry and the weakening shipbuilding industry are anticipated to impact the overall marine dynamic positioning system market in the coming years. The deterioration in the market conditions for offshore oil & gas industry and decline in oil prices are some of the reasons that restrain the market growth. In addition, global oversupply, recessions, and change in economic fundamentals limit the growth of the shipbuilding industry.
