Marine internal combustion engine is a kind of device applied in marine propulsion system. It supplies power to the marine ships. The marine internal combustion engine is quite vast compared with the engines used in automobiles. It is made up of several components such as the block, crankshaft, bedplate, pistons, cylinder head and valves. Generally, marine internal combustion engine take heavy oil and diesel as fuel. To meet the need of power of marine ship, the marine internal combustion engines generally have a large horsepower. In this report, the statistical data we provide doesn't include the engines used in small boats and recreational ships. The industry's leading manufacturers are Mitsui, Caterpillar and CSIC, which accounted for 14.49%, 13.35% and 12.67% of revenue in 2019, respectively.
