The global Marine Propulsion market was valued at 1155.27 Million USD in 2021 and will grow with a CAGR of 2.16% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Marine propulsion is a mechanism or system used to generate thrust to move a ship or boat across water. The setup of a propulsion system depends on the vessel size, transport system, and type of operation. Diesel marine propulsion system is a common type of marine propulsion system. The segment constitutes more than 46% share of the global marine propulsion market. Diesel marine propulsion systems are used in almost all types of vessels such as mall boats, ferries, defense vessels, and recreational vessels. In full electric marine propulsion systems, the engine is directly connected to the generator. Full electric marine propulsion enhances the overall efficiency of the vessel and also reduces the carbon footprint. Full electric marine propulsion system consists of a series of motors and generators. Electric power is transmitted from the engine to the propeller shaft through the motor controller and electric motor.
