The global Maritime Fenders (Marine Fender) market was valued at 5.9 Million USD in 2021 and will grow with a CAGR of 3.48% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Marine fenders are used between marine vessels and docking structures to prevent damage during berthing. As for the global Marine Fender industry, the most production value share is led by several giants. The giant Trelleborg, which has 8.78% market share in 2017, is the leader in the Marine Fender industry, followed by Bridgestone and Sumitomo Rubber. Asia market is led by Japanese manufacturers, along with the main ship building industry in Japan, Korea and China, however, industry transfer is obvious from Japan and Europe to China and other southeast countries, like Indonesia. China Marine Fender industry has developed quickly in the past ten years, along with port infrastructure, ship building industry and high level import & export activities. Matured rubber related industry, a complete supply chain and huge consumption market, are all factors that witnessed this development. Natural rubber price is at rather low level currently and is forecasted to be unsustainable. Players in this industry should pay attention to the price fluctuation and try to enhance market position before the raw material price rise again. Although sales of Marine Fender products bring a lot of opportunities, the study group recommends the new entrants who just have money but without technical advantage, raw materials advantage and downstream support, do not

enter into the Marine Fender field hastily.
