### Abstracts

The global Masterbatch market was valued at 109.33 Million USD in 2021 and will grow with a CAGR of 6.93% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Masterbatches are solid or liquid mixture of additive or pigments used for coloring or enhancing other properties of polymers such as UV stabilizing, flame retardation, antistatic and antilocking. It allows the processor to color raw polymer economically during the plastics manufacturing process. It is widely used in packaging industry, automobile industry, building & construction industry and electrical & electronics industry. At present, the production of masterbatch distributed evenly in Europe, USA, China and India, taking about 28.3 %, 15.6%, 33.4%, 5.7% respectively in 2015. Masterbatch industry in India is highly fragmented with a few major players & large number of small and medium players who account for majority of the market share. To meet the strong demand of masterbatch, many manufacturers established manufacturing plants in Europe. The masterbatches industry is highly competitive due to low entry barriers as the industry is less capital intensive and there is no major technology involved. Given the competitive landscape of the industry, the bargaining power of players with clients is low thereby resulting in vulnerability to fluctuation in raw material prices.
