Abstracts

The global Material Handling Robots market was valued at 5775.01 Million USD in 2021 and will grow with a CAGR of 12.79% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Material handling robots are used in various streams such as pick and place, palletizing/depalletizing, and the packaging sector. They are used to improve material handling efficiency, flexibility, and constancy in the manufacturing processes. The use of material handling robots in a production plant not only reduces the ergonomic threats but also helps to improve the lean management system of the business. Material handling robots can manage case-picking functions and can also handle carts for contentment centers or manufacturing process for parts to the lines of operation. The lifting capacity of material handling robots can be over 150 lbs (68 kg). The twin arm manipulator can lift and handle almost every warehoused material. These robots help reduce workplace fatigue and injury. Increases in the number of manufacturing facilities and the growth of production plants are among the major drivers of the material handling robotics market. The ability to simplify and decrease time consumption in production functions, while enhancing dependability, accuracy, and the involvement of low task force are the additional market drivers. The development of the material handling robotics market is expected to rise due to the suitability and the substantial cost reduction offered by these robots. Sorting systems, sliding belts, picking systems,

and material putting robots are some of the material handling robots that have gained significance in recent years. The initial investment required for material handling robots is high, but in the long run these robots provide a competitive edge. Chinese players already have planned to expand the production capacity of industrial robots in next few years. But most of robots are low-end products, lack of core technologies and competitiveness, low stability and high cost, dependence on importing robot reducers, controllers and servo motors from Japanese and European players like Nabtesco, Harmonic and SUMITOMO etc.
