## Abstracts

The global Material Jetting (MJ) market was valued at 82.11 Million USD in 2021 and will grow with a CAGR of 4.69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Material jetting is the equipment which could mold materials with material jetting technology. Material jetting has the added advantage of being able to 3D print using multiple materials at once. Objects can be produced with a variety of materials as well as customize the specific area where those materials are placed. This eliminates the need to print separate layers of different materials and assemble them later. In a single run, one can produce complete products with parts made from separate materials. In consumption market, North America and Europe are the mainly consumption regions due to the bigger demand of downstream applications. In 2016, these two regions occupied 92.19% of the global consumption volume in total.
