MBS is an impact modifier formed by ternary copolymerization of methyl methacrylate, butadiene and styrene. It has a typical core-shell structure in sub-micron size. The core is a rubber phase with a diameter of 10-100nm. Because methyl methacrylate and PVC have similar solubility parameters, it acts as an interface bonding agent between PVC resin and rubber. Add 5%-10 to PVC and PVC phase. % MBS resin can increase the impact strength of the product by 4-15 times, and at the same time improve the weather resistance and processing fluidity of the product. Therefore, MBS resin has been widely used as a PVC impact modifier. At present, major global manufacturers include Dow, Kaneka, LGchem, Wanda Chemical, Mitsubishi Chemical, etc. The top five manufacturers account for more than 60% of the market. From a regional perspective, China is the world's most important consumption area. China's MBS consumption accounts for about 35% of the global total, it is developing rapidly. Secondly, Europe and North America have made greater contributions to the consumption of MBS. In terms of product classification, MBS can be divided into transparent and non-transparent, among which transparent MBS dominates the market, occupying about 67% of the market. At the application level, the product can be divided into PVC sheets, pipes, etc.
