Abstracts

The global Meat Starter Culture market was valued at .99 Million USD in 2021 and will grow with a CAGR of 4.8% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Starter cultures develop color and flavor and provide safety. The addition of any commercial culture to the sausage mix provides a safety hurdle, as those millions of freshly introduced bacteria start competing for food (moisture, oxygen, sugar, protein) with a small number residing in meat bacteria, preventing them from growing. It may be called a biological competition among bacteria. The classification of Meat Starter Culture includes maturation starters and surface starters, and the proportion of maturation starters in 2017 is about 59%.
