Mechanical vapor recompression (MVR) Evaporators is an energy recovery process where energy is added to low-pressure vapor (usually water vapor) by compressing it. The result is a smaller volume of vapor at a higher temperature and pressure, which can be used to do useful work. In the coming years there is an increasing demand for Mechanical Vapor Recompression (MVR) Evaporators in the regions of United States and Europe that is expected to drive the market for more advanced Mechanical Vapor Recompression (MVR) Evaporators. Growth in government budgets in the principal countries, increasing of chemical fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Mechanical Vapor Recompression (MVR) Evaporators will drive growth in global markets.
