The global Medical Cyclotron market was valued at 1 Million USD in 2021 and will grow with a CAGR of 4.18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Medical Cyclotron is a cyclotron that is a type of compact particle accelerator used to produce quantities of radioactive isotopes called positron emitters. Stable, non-radioactive isotopes are put into the cyclotron which accelerates charged particles to high energy in a magnetic field. The stable isotopes then react with a beam to form radioactive isotopes, which are then taken from the cyclotron, transformed into positron-emitting radiopharmaceuticals (PERs) within the facility's laboratories and are delivered to nuclear medicine where they are used for imaging procedures. Cyclotrons are a clean nuclear technology and create very little radioactive waste as a result of their operation. The leading manufactures mainly are IBA, GE, Siemens, Sumitomo and ACSI. IBA is the largest manufacturer; its revenue of global market exceeds 18% in 2016. The next is GE and Siemens. There are mainly two type product of medical cyclotron market: low energy medical cyclotron and high energy medical cyclotron. High energy medical cyclotron accounts the largest proportion. Geographically, the global medical cyclotron market has been segmented into North America, Europe, Asia Pacific and other. The Asia Pacific held the largest share in the global medical cyclotron products market, its revenue of global market exceeds 31% in 2016. The next is Europe
