The global Medical Grade Hydroxypropyl Cellulose market was valued at 44.01 Million USD in 2021 and will grow with a CAGR of 6.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Hydroxypropyl cellulose is classified into low-substituted hydroxypropyl cellulose (L-HPC) and high-substituted hydroxypropyl cellulose (H-HPC) depending on the content of its substituent hydroxypropoxy group. Low-substituted hydroxypropyl cellulose L-HPC is insoluble in water, swells into a colloidal solution in water; it is also insoluble in ethanol, acetone or ether. It has the characteristics of easy press molding and large expansion volume, mainly as a tablet dry adhesive. And disintegrants are widely used in China. H-HPC is soluble in water and various organic solvents at room temperature. It has good thermoplasticity, adhesion and film forming properties. It can be used as a binder, film former, hydrophilic skeleton and hot melt extrusion carrier. A wide range of multi-functional accessories have a long history of application in the European, American and Japanese markets.
