### Abstracts

The global Medical Lasers market was valued at 6632.5 Million USD in 2021 and will grow with a CAGR of 8.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Medical lasers are medical devices that use precisely focused light sources to treat or remove tissues. The term 'laser' stands for light amplification by stimulated emission of radiation. Rise in incidence of eye disorders due to growth in aged population, increase in number of patients using advanced laser-based treatments globally, and surge in importance of aesthetics are the factors that drive the market growth. Furthermore, stringent safety regulations and high rate of failure of laser-based surgical procedure hamper the market growth. Increased disposable incomes and growth in demand for laser treatment in the emerging countries are expected to offer lucrative opportunities for the market growth.
