The global Medical Robotics market was valued at 2717.4 Million USD in 2021 and will grow with a CAGR of 2.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Medical Robotics is a robot used in the medical sciences. They include, but are not limited to, surgical robots. These are in most telemanipulators. Robotics has a long, colorful history, but its applications have only recently impacted the healthcare industry. In 2000, the field's current main player, Intuitive Surgical, was one of the first firms to bring a surgical robot to market. At the time, the company's marketing was centered on remote surgical procedures. However, the ensuing years have seen the applications of this life-changing technology increase exponentially, to the point where the possibilities enabled by today's medical robots are endless. Each participant sees added value in this technology: minimal invasiveness for the patient, enhanced microsurgery and precision capabilities for the surgeon, and cost optimization for the healthcare system due to patients' shorter recovery time.
