Medical tubing packaging is a category of healthcare packaging which refers to tubing that meets certain medical standards, and can be used for a variety of medical and pharmaceutical applications. Silicone medical tubing packaging is expected to register significant growth in the next five years, which can be attributed to the high level of biocompatibility. Silicone is resistant to chemicals and has a varying range of surface hardness. However, one of the key restraints for growth of the global Silicone medical tubing packaging market is - cost. Silicone being expensive, is used only for medical applications where high performance characteristics are desired, such as urinary catheterization.
