The global Medical X-Ray Generator market was valued at 289.79 Million USD in 2021 and will grow with a CAGR of .18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Medical (Diagnostic) X-ray generators are designed to provide electrical energy to be converted into X radiation. The quality and quantity of X radiation is pre-determined by the radiographer who sets the appropriate exposure factors at the control desk. The principal function of an x-ray generator is to provide current at a high voltage to an x-ray tube. Electrical power available to a hospital or clinic provides up to about 480 V, much lower than the 20,000 to 150,000 V needed for x-ray production. Transformers are principal components of x-ray generators; they convert low voltage into high voltage through a process called electromagnetic induction. X-ray Generator Modules Modules of the x-ray generator include the high-voltage power circuit, the stator circuit, the filament circuit, the focal spot selector, and automatic exposure control (AEC) circuit. Generators typically have circuitry and microprocessors that monitor the selection of potentially damaging overload conditions in order to protect the x-ray tube. Combinations of kV, mA, and exposure time delivering excessive power to the anode are identified, and such exposures are prohibited. Heat load monitors calculate the thermal loading on the x-ray tube anode, based on kV, mA, and exposure time, and taking cooling into account. Some x-ray systems are equipped with sensors that

measure the temperature of the anode. These systems protect the x-ray tube and housing from excessive heat buildup by prohibiting exposures that would damage them. This is particularly important for CT scanners and high-powered interventional fluoroscopy systems. Medical X-Ray Generator is mainly produced in Europe and United States. CPI Medical, Spellman and Siemens are the major players in the industry. Their production accounts for more than 40% global Medical X-Ray Generator industry market share.
