Abstracts

The global Membrane Filtration market was valued at 434.03 Million USD in 2021 and will grow with a CAGR of 7.2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Membrane Filtration market. Membrane Filtrations or 'membranes' are polymer films with specific pore ratings. Membranes retain particles and microorganisms that exceed their pore ratings by acting as a physical barrier and capturing such particles on the surface of the membrane. The Membrane Filtration industry has many manufacturers in the world, and high-end products mainly from U.S. and Western European. Membrane Filtration can be divided into the following categories, reverse osmosis membrane, microfiltration membrane, ultrafiltration membrane and nanofiltration membrane, of which, reverse osmosis membrane is the most important type of application, accounting for 43.6% of the global membrane separation market in 2016. This proportion is higher in underdevelopment areas such as China. Inorganic Membrane products market is rarely small compare to the Organic Membrane products. Inorganic product is dominated by ceramic membrane, and its price is 4-8 times higher than that of PVDF products, and usually used in the acid and alkali resistant environment, like pharmaceutical industry.
