Memristors are basic circuit elements, which possess the property of memory as well as resistors. The memristors have emerged as a viable substitute of flash memories and they also help in the fabricating advanced neural networks. Memristor market is currently in its nascent phase of commercialization as most of the players are spending on R&D of this technology. However, apart from being a viable substitute of flash memories, this technology has immense possibilities to contribute and change the course of neural and synaptic networks. With the increasing trend of IoT and rise in demand of artificial intelligence across several industry verticals, lucrative opportunities are awaiting in the global memristor market.
