An electronic oscillator is an electronic circuit that produces a periodic, oscillating electronic signal, often a sine wave or a square wave. A crystal oscillator is an electronic oscillator circuit that uses the mechanical resonance of a vibrating crystal of piezoelectric material to create an electrical signal with a precise frequency. Microelectromechanical system (MEMS) oscillators are timing devices that generate highly stable reference frequencies, which can measure time. Japan was the leader of the production market with the share of 49.24%. For the rest half of the production market, it was mainly divided by North America, which accounted for 20.63%, China for 18.87% , and Europe for 7.87%. MEMS & Crystal Oscillators are being widely used in industrial, automobile, wearable equipment, consumer electronics and communication equipment. Among the listed applications, consumer electronics and automobile are the most popular two areas.
