Mesodermal therapy is also known as 'Mesotherapy'. The most important products in mesoderm therapy are water-light needles, rolling needles and micro-needles also occupy part of the market. Mesodermal therapy is named after the source of skin differentiation. After the formation of the fertilized egg, the fertilized egg continues to split and increase in the uterus, eventually forming an embryo. The embryo forms three germ layers-endoderm, mesoderm, and ectoderm. Human skin is differentiated from ectoderm and mesoderm. The skin is divided into epidermis and dermis, the epidermis is differentiated from the ectoderm, and the dermis is differentiated from the mesoderm. The mesotherapy market is relatively fragmented and has many brands. In 2019, Bloomage, Dong Kook and Filorga accounted for approximately 40% of global sales. At present, the major domestic manufacturers of hyaluronic acid injections are Huaxi Bio. On the one hand, the epidemic has promoted the development of the medical and aesthetic APP industry, and the internet celebrity economy has brought goods and online promotion. On the other hand, the operating conditions and financial situation of medical and aesthetic institutions have also been negatively affected by the new coronary pneumonia epidemic.
