Metal casting is a kind of metal forming object obtained by various casting methods, that is, the melted liquid metal is injected into the prepared mold by pouring, injection, inhalation or other casting methods. After cooling, it is ground and other follow-up processing methods, and the object with certain shape, size and performance is obtained. All major metals can be cast. The most common are iron, steel, aluminum, magnesium, zinc and copper based alloys. Metal casting methods include conventional molding process, precision molding process, chemical combined sand molding process, and innovative molding and casting technology. Metal castings are used in automobiles, trucks, airplanes, trains, mining and construction equipment, oil wells, kitchenware, pipes, toys, space shuttles, wind turbines, nuclear power plants, tanks, bombs, etc. In terms of product type and technology, the classification of metal castings includes gray iron castings, ductile iron castings, steel castings, aluminum castings and other castings. In 2019, the proportion of gray iron castings in the production is about 40%. Metal castings are widely used in automobile industry, aviation industry, construction industry and energy industry. The automotive industry accounts for more than 27% of the market share, and the energy sector accounts for about 23%.
