In the context of machining, a cutting tool is any tool that is used to remove material from the workpiece by means of shear deformation. Cutting may be accomplished by single-point or multipoint tools. Single-point tools are used in turning, shaping, planing and similar operations, and remove material by means of one cutting edge. Milling and drilling tools are often multipoint tools. Grinding tools are also multipoint tools. Each grain of abrasive functions as a microscopic single-point cutting edge (although of high negative rake angle), and shears a tiny chip. In the coming years there is an increasing demand for Metal Cutting Tools in the regions of USA and Europe that is expected to drive the market for more advanced Metal Cutting Tools. Increasing of automotive fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Metal Cutting Tools will drive growth in China markets. Globally, the Metal Cutting Tools industry market is low concentrated as the manufacturing technology of Metal Cutting Tools is relatively matures than some high-tech equipment. And some enterprises, like Sandvik, Kennametal, Iscar, etc. are well-known for the wonderful performance of their Metal Cutting Tools and related services. At the same time, Europe, occupied 22.74%

revenue market share in 2016, is remarkable in the global Metal Cutting Tools industry because of their market share and technology status of Metal Cutting Tools. The Revenue of Metal Cutting Tools is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Metal Cutting Tools industry may not keep that fast. But it is surely forecasted that the market of Metal Cutting Tools is still promising.
