A metal detector is an electronic instrument which detects the presence of metal nearby. Metal detectors are useful for finding metal inclusions hidden within objects, or metal objects buried underground. They often consist of a handheld unit with a sensor probe which can be swept over the ground or other objects. If the sensor comes near a piece of metal this is indicated by a changing tone in earphones, or a needle moving on an indicator. Usually the device gives some indication of distance; the closer the metal is, the higher the tone in the earphone or the higher the needle goes. Metal detector is major applied in food & beverage, pharmaceutical, cosmetic and other industry, in 2018, demand for a food & beverage dominated the market, with 60% share, reach to 60000 units sold annually, while pharmaceutical and cosmetic industry seen a faster growth in the last few years.
