Abstracts

The global Metal Implants and Medical Alloys market was valued at 9885.78 Million USD in 2021 and will grow with a CAGR of 5.43% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Corrosion resistance of the currently used 316L stainless steel, cobalt-chromium, and titanium-based implant alloys relies on their passivation by a thin surface layer of oxide. Stainless steel is the least corrosion resistant, and it is used for temporary implants only. The growing number of accidents and sports-related injuries and the increasing launch of technologically advanced products are also major factors supporting market growth.
