Abstracts

The global Metal Material Based 3D Printing market was valued at 27.24 Million USD in 2021 and will grow with a CAGR of 26.6% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Metal 3D printing processes be used to manufacture complex, bespoke parts with geometries that traditional manufacturing methods are unable to produce. Metal 3D printed parts can be topologically optimized to maximize their performance while minimizing their weight and the total number of components in an assembly. Metal 3D printed parts have excellent physical properties and the available material range includes difficult to process otherwise materials, such as metal superalloys. The material and manufacturing costs connected with metal 3D printing is high, so these technologies are not suitable for parts that can be easily manufactured with traditional methods. At present, in the developed countries the metal material based 3D printing industry is generally at a more advanced level. The world large manufacturers are mainly concentrated in USA and Europe. Meanwhile, they have more advanced equipment, strong R & D capability, and the technical level is in a leading position.
