The global Metal Organic Chemical Vapor Deposition (MOCVD) market was valued at 67.75 Million USD in 2021 and will grow with a CAGR of 11.12% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Metalorganic vapour-phase epitaxy (MOVPE), also known as organometallic vapour-phase epitaxy (OMVPE) or metalorganic chemical vapour deposition (MOCVD), is a chemical vapour deposition method used to produce single- or polycrystalline thin films. It is a highly complex process for growing crystalline layers to create complex semiconductor multilayer structures. In contrast to molecular-beam epitaxy (MBE), the growth of crystals is by chemical reaction and not physical deposition. This takes place not in vacuum, but from the gas phase at moderate pressures (10 to 760 Torr). As such, this technique is preferred for the formation of devices incorporating thermodynamically metastable alloys, and it has become a major process in the manufacture of optoelectronics. North America Metal Organic Chemical Vapor Deposition (MOCVD)'s market size was valued at around USD 88 million in 2017. Europe is expected to exceed USD 72 million by 2017, at a CAGR of over 6.26% from 2017 to 2025. Asia-Pacific is estimated to be the third largest market for Metal Organic Chemical Vapor Deposition (MOCVD) in 2017, with China expected to lead the market in terms of growth rate from 2013 to 2018. Asia-Pacific Metal Organic Chemical Vapor Deposition

(MOCVD) market size is expected to reach US\$ 641 million by 2017.
