The global Methanol Protein market was valued at 47.52 Million USD in 2021 and will grow with a CAGR of 4.02% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Methanol protein production mainly uses methanol as a carbon source and uses selective microorganisms to produce single-cell protein. Methanol protein is called second-generation single-cell protein. Compared with other single-cell proteins, methanol protein has the characteristics of abundant resources, easy access to raw materials, no occupation of arable land and production without being affected by weather conditions, large-scale industrial production, stable protein quality, and high nutritional value. The main types of Methanol Protein include Bacteria Type and Yeast Type. Based on product type, the Bacteria Type segment is projected to account for the largest market share of over 77% in 2019, while Yeast Type only took up about 23%. Considering of the consumer market, Asia-Pacific is the largest consumption area, making up over 35% of global market in 2019. Following Asia-Pacific, Europe and North America rank the second and third with market share of about 28% and 24% respectively.
