Microarray or biochip is a lab-oriented microscope slide that is usually made of glass, silicon chip, or nylon membrane. It is a 2D array (sometimes 3D) whose surface is provided with thousands of minute pores in defined positions. The microarray is a recently developed technology and was discovered only two decades ago. It is mostly used in cancer research and in the pharmacological treatment of other diseases like oral lesions. It enables researchers to investigate and analyze the expression of thousands of genes in a single reaction and address various issues. Illumina and Thermo Fisher Scientific are the two largest companies in the industry, accounting for more than 74 percent of 2018 revenue combined. In terms of production value, the United States occupies the absolute position, with production value accounting for more than 86%.
