The global Microbial Biosurfactants market was valued at 19.41 Million USD in 2021 and will grow with a CAGR of 4.41% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Biosurfactants can be defined as the surface-active biomolecules produced by microorganisms with wide-range of applications. In recent years, due to their unique properties like specificity, low toxicity and relative ease of preparation, these surface-active biomolecules have attracted wide interest. Due to their unique functional properties, biosurfactants were used in several industries including organic chemicals, petroleum, petrochemicals, mining, metallurgy (mainly bioleaching), agrochemicals, fertilizers, foods, beverages, cosmetics, pharmaceuticals and many others. They can be used as emulsifiers as well as demulsifiers, wetting agents, foaming agents, spreading agents, functional food ingredients and detergents. The interfacial surface tension reducing ability of biosurfactants made them to play important role in oil recovery and bioremediation of heavy crude oil. Glycolipid, Lipopeptides and lipoproteins and Fatty acids, phospholipids and neutral lipids are common microbial biosurfactants. Europe has the largest microbial biosurfactants production in 2015 with 42.65% production market share; Followed by USA and China, which occupied 18.49% and 13.86% production market share. Europe consumed 37.35% of the global total microbial biosurfactants output in 2015; Followed by North America and China in 16.89% and

12.27%.
