The global MicroLED market was valued at 17.53 Million USD in 2021 and will grow with a CAGR of 76.48% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

microLED, also known as micro-LED, mLED or ?LED, is an emerging flat panel display technology. As the name implies, microLED displays consist of arrays of microscopic LEDs forming the individual pixel elements. When compared to the widespread LCD technology, microLED displays offer better contrast, response times, and energy efficiency. Increasing demand for brighter and more power-efficient display panels for smartwatches, mobile devices, and NTE (AR/VR) devices is a major factor for the growth of the market. The rising interest of electronic giants Apple, Samsung, and Sony and interest shown by input/component suppliers in the supply chain also contribute to the market growth.
